## Vencomatic® Veranda system

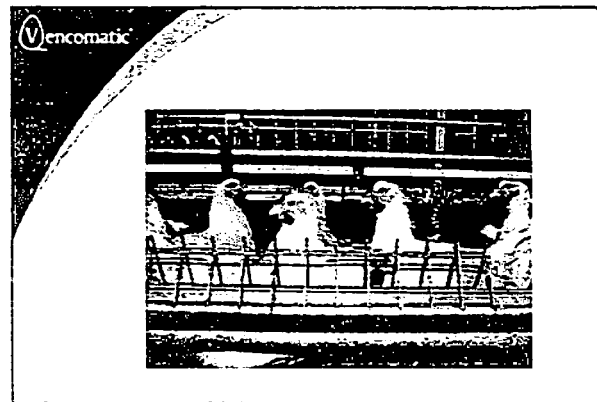

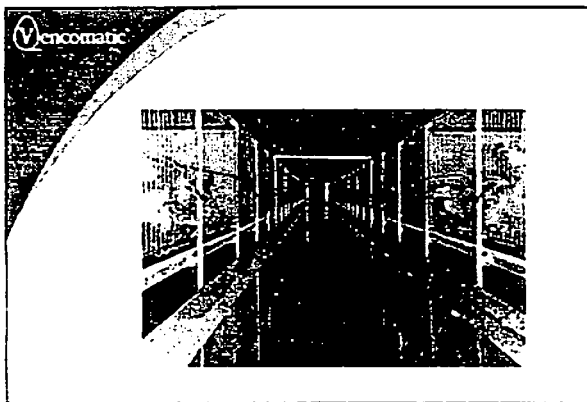

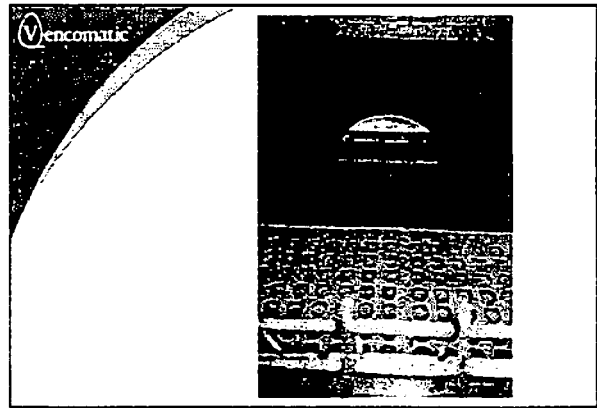

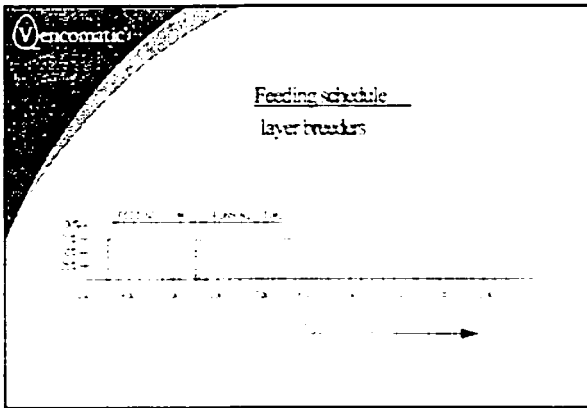

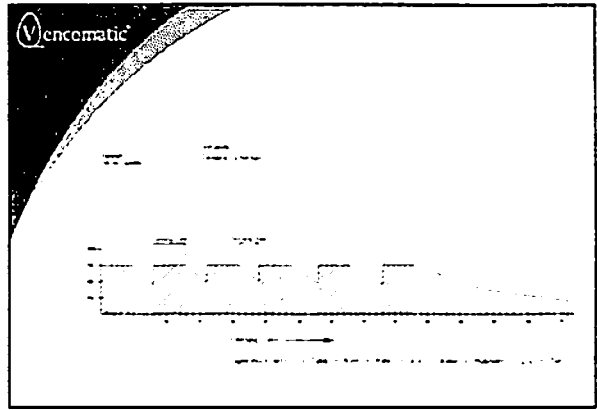

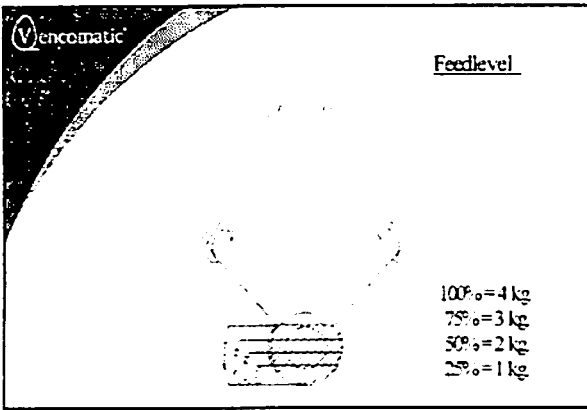

Colony Cage system

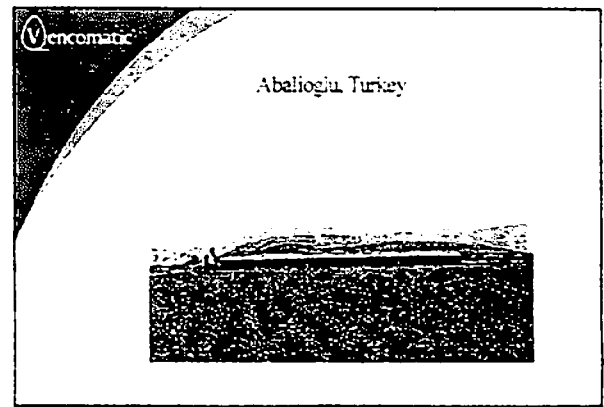

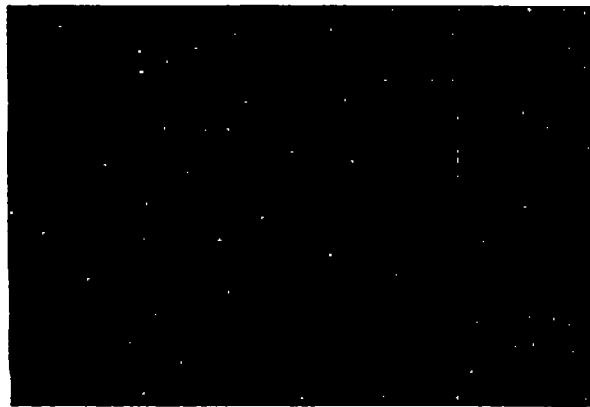

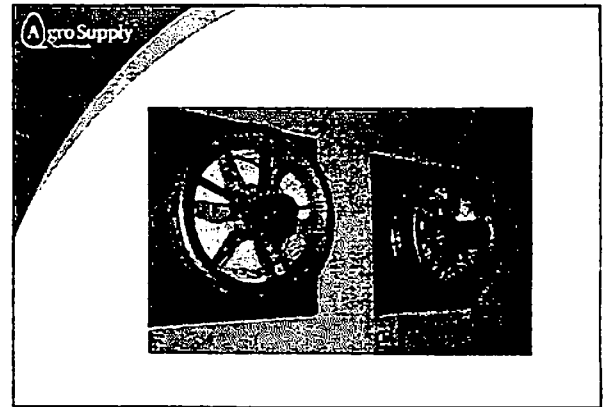

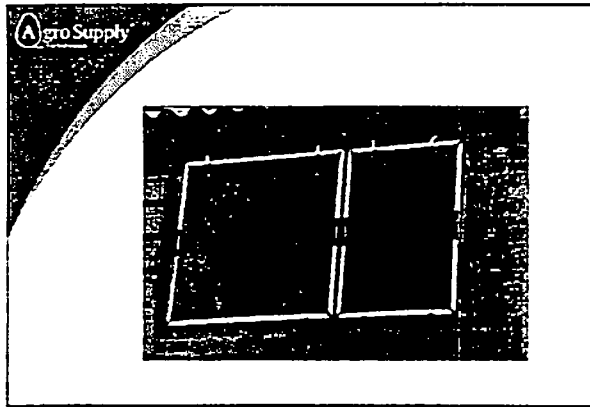

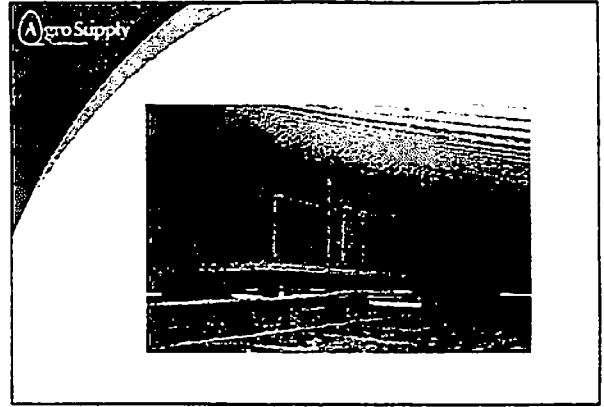

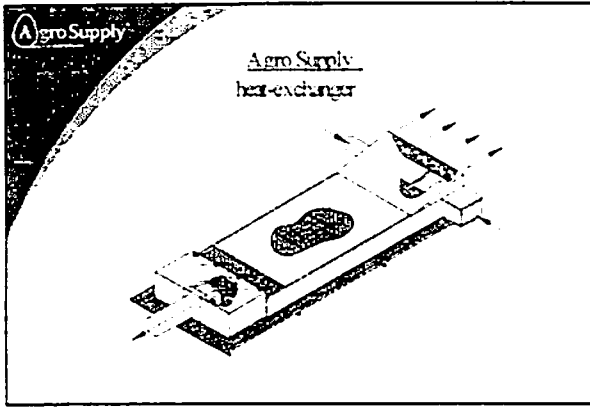

Broiler (grand parents)  
Layer (grand parents)

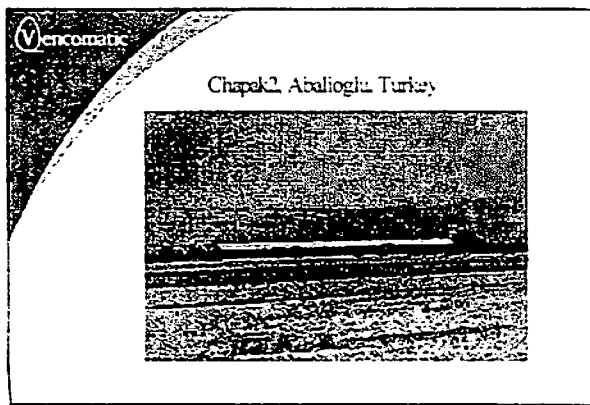

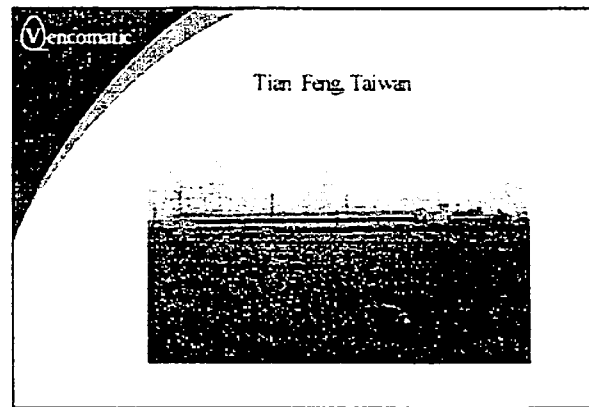

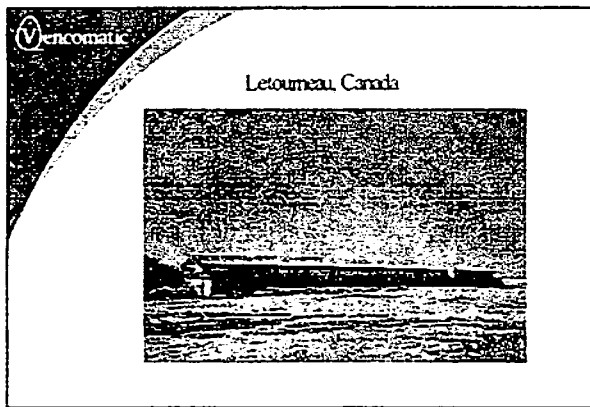

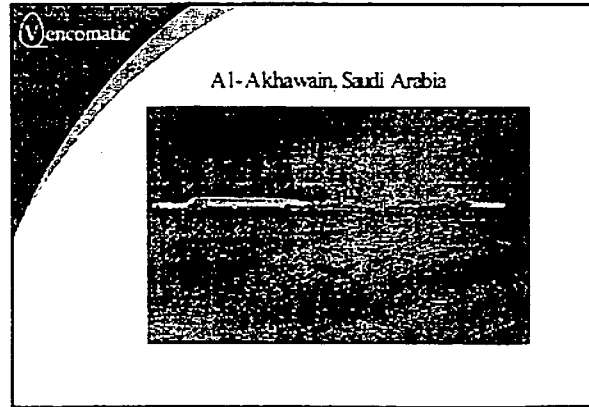

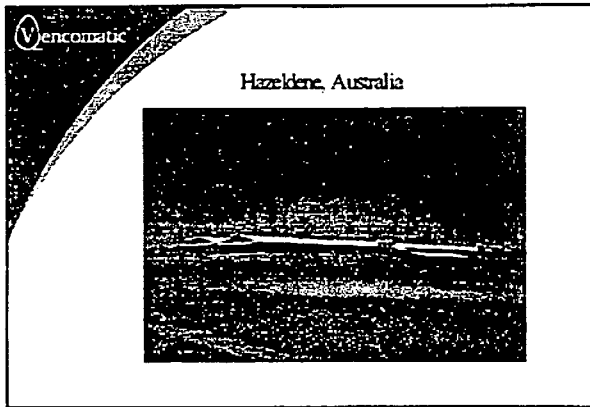

(Maximum egg production)

Venomatic

**Results Veranda**  
Broiler breeders  
21 - 42 weeks

	Veranda	Floor-housing
Nr. eggs / hen housed	165.5	158.2
Nr. hatching eggs / hen housed	157.2	148.5
Fecund. hatching egg / gramme	26	26
Fecund. hen housed / kg	42	43.9
Mortality / females %	7.4	9.5

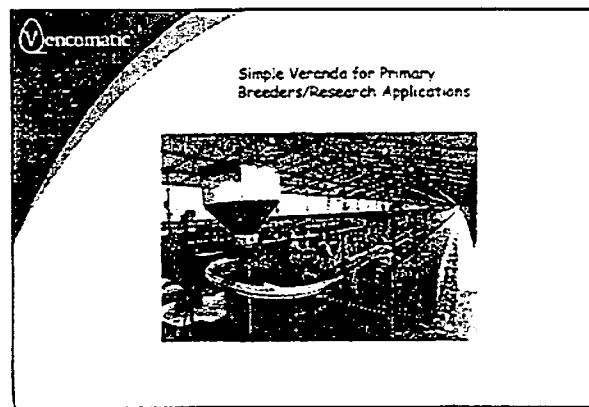

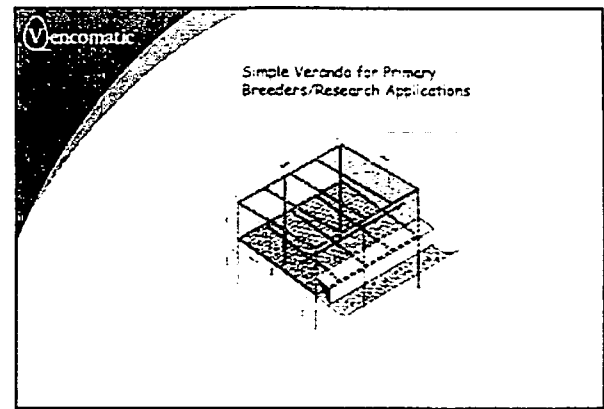

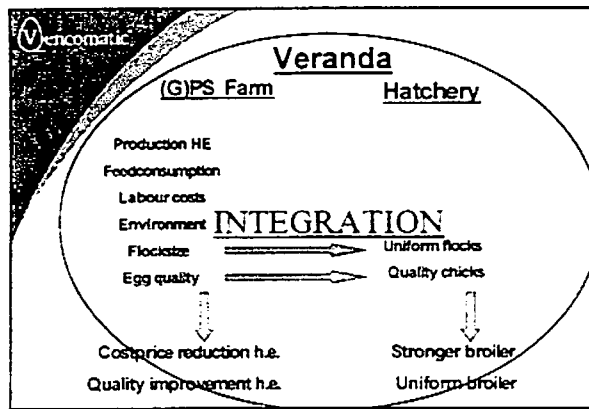

Vencomatic

### Technical Results

	Veranda	Floor	Diff
Eggs/h/h	165,1	152,8	-12,3
Hatching eggs/h/h	157,5	146,8	-11,0
Gram feed/h.e.	284	284	- 30
Mortality females	7,8%	11,9%	- 4,1%

Same farm  
 Same breed (Hybro 3 — Cobb 3 — Ross 2)  
 Same strain  
 Same age (10 weeks)  
 Same feed

- Vencomatic
- ### Summary advantages Veranda
- up to 85% reduction of ammonia
  - feed savings of 10% per hatching-egg
  - reduction of moisture and mineral emission
  - dry manure with a minimum of 55% dry matter
  - less chance of disease, also less chance of contamination
  - extensive automation reduces labour to a minimum
  - lower production costs of the hatching-egg maximises return through increased capacity and better egg quality
    - lower mortality for both females and males
  - lower concentration of dust providing a better living environment for people as well as animals
    - no floor eggs resulting in a more balanced workload
  - better hatching-egg quality due to the absence of floor eggs.
    - Result: fitter young chickens
  - completely enclosed operations thus minimising the risk of disease
    - manure processed into manure pellets on site

### Vencomatic® Egg transport System

#### VENCO-BELT

egg friendly transport system  
 plastic carriers  
 small radius  
 different height levels  
 central collecting point  
 combined with a Prinzen packer

Vencomatic

**VENCO-BELT**

90° curve - incline/decline      plastic corner
