 Raleigh, NC 27695-8008
 Phone: 919-515-9563 Fax: 919-515-6883

This exciting event is designed to provide to the development community new and profitable options that will allow greater flexibility and improved returns for residential projects, while advancing community-oriented goals such as conservation of open space and natural resources.

Conservation-based development is used across the country to ensure that developers and local leaders can work together to accomplish their different objectives, namely the construction of full density residential subdivisions (developers' goal) in such a way that helps to build a community-wide network of lands that conserve natural resources and assets (leaders' goal). The goal is a better and more profitable product for the developer and a better environment for the community. By working together we can build a better future for all.

The featured speaker for this event is Randall Arendt, whose designs are "twice green" because they succeed both economically and environmentally. In addition to Mr. Arendt, Frank Jacobus, of CedarCroft Homes in Davidson, will moderate and give an overview of his experiences using conservation-based development. Also on the program is Anna Baucom, Anson County Chair of County Commission, who will share their "Anson Green" Land Use Plan that promotes the twice green design ideas. Hal Johnson, Randolph County Planning Director, will discuss their experience with conservation-based design. For more information about Randall Arendt visit: www.greenerprospects.com

The workshop will include a hands-on exercise in residential community planning using conservation-based development principals. An application for planners' continuing education credits will be submitted.
